

JSON by the other elephant

PostgreSQL

FOSDEM PGDay
January 2016
Stefanie Janine Stölting
[@sjstoelting](#)

JSON

- JavaScript Object Notation
- Don't have to care about encoding, it is always Unicode, most implementations use UTF8
- Used for data exchange in web application
- Currently two standards [RFC 7159](#) by Douglas Crockford und ECMA-404
- PostgreSQL implementation is RFC 7159

JSON Datatypes

JSON

Available since 9.2

BSON

Available as extension on GitHub since 2013

JSONB

Available since 9.4

Compressed JSON

ACID

Atomicity, Consistency, Isolation, Durability is a set of properties that guarantee that database transactions are processed reliably. ¹

¹ See <https://en.wikipedia.org/wiki/ACID>

Performance

MongoDB 2.6 vs PostgreSQL 9.4 Performance

Test done by
[EnterpriseDB](#),
see the [article](#)
by [Marc Linster](#)

JSON Functions

`row_to_json({row})`

Returns the row as JSON

`array_to_json({array})`

Returns the array as JSON

`jsonb_to_recordset`

Returns a recordset from JSONB

JSON Operators

Array element

->{int}

Array element by name

->{text}

Object element

->> {text}

Value at path

#> {text}

Index on JSON

Index JSONB content for faster access with indexes

GIN index overall

```
CREATE INDEX idx_1 ON jsonb.actor USING  
GIN (jsondata);
```

Even unique B-Tree indexes are possible

```
CREATE UNIQUE INDEX actor_id_2 ON  
jsonb.actor((CAST(jsondata->>'actor_id' AS  
INTEGER)));
```

New JSON functions

PostgreSQL 9.5 new JSONB functions:

`jsonb_pretty`

`jsonb_set`

Available as extensions for 9.4 at PGXN: [jsonbx](#)

Data sources

The Chinook database is available at chinookdatabase.codeplex.com

Amazon book reviews of 1998 are available at

examples.citusdata.com/customer_reviews_nested_1998.json.gz

Chinook Tables

	T tablename
1	Artist
2	Invoice
3	Employee
4	Customer
5	Playlist
6	InvoiceLine
7	Album
8	Genre
9	PlaylistTrack
10	MediaType
11	Track

	T table_name	T column_name	T data_type
1	Artist	ArtistId	integer
2	Artist	Name	character varying (120)

	T table_name	T column_name	T data_type
1	Album	AlbumId	integer
2	Album	Title	character varying (160)
3	Album	ArtistId	integer

	T table_name	T column_name	T data_type
1	Track	TrackId	integer
2	Track	Name	character varying (200)
3	Track	AlbumId	integer
4	Track	MediaTypeId	integer
5	Track	GenreId	integer
6	Track	Composer	character varying (220)
7	Track	Milliseconds	integer
8	Track	Bytes	integer
9	Track	UnitPrice	numeric

CTE

Common Table Expressions will be used in examples

- Example:

```
WITH RECURSIVE t(n) AS (  
    VALUES (1)  
    UNION ALL  
    SELECT n+1 FROM t WHERE n < 100  
)  
SELECT sum(n), min(n), max(n) FROM t;
```

- Result:

	sum bigint	min integer	max integer
1	5050	1	100

Live Examples

Let's see, how it does work.

Live with Chinook data

-- Step 1: Tracks as JSON with the album identifier

```
WITH tracks AS
(
    SELECT "AlbumId" AS album_id
      , "TrackId" AS track_id
      , "Name" AS track_name
    FROM "Track"
)
SELECT row_to_json(tracks) AS tracks
FROM tracks
;
```

tracks	
1	{"album_id":1,"track_id":1,"track_name":"For Those About To Rock (We Salute You)"}
2	{"album_id":2,"track_id":2,"track_name":"Balls to the Wall"}
3	{"album_id":3,"track_id":3,"track_name":"Fast As a Shark"}
4	{"album_id":3,"track_id":4,"track_name":"Restless and Wild"}
5	{"album_id":3,"track_id":5,"track_name":"Princess of the Dawn"}
6	{"album_id":1,"track_id":6,"track_name":"Put The Finger On You"}
7	{"album_id":1,"track_id":7,"track_name":"Let's Get It Up"}
